

Default Order and Site Settings

Product information management > Common > Released products > Manage inv. tab

Summary Default order settings allow Site and Warehouse attributes to be filled in automatically. Order settings also provide additional quantity attributes such as minimum and maximum quantity.

Steps

1. Default order settings
2. Site specific order settings

Tips

- Enter default settings to limit the user's data entry burden for item transactions

Default order settings

- Click the **Default order settings** button.
- Choose the default **Purchase, Inventory,** and **Sales site**.

Movie 1.5 Default Order and Site Settings

The screenshot displays the SAP 'Released products' interface. A dialog box titled 'Site specific order settings (1 - ceu) - Item number: 9027, iPad64GBWhite' is open, showing the 'Inventory' tab. The dialog box contains a table with the following data:

Site	Purchase warehouse	Inventory warehouse	Sales warehouse
1	11	11	11

The background interface shows the 'Released products' list with the following columns: Item number, Product name, and Description. The item 9027 is listed with the product name 'iPad - 64GB - White'.
